Dear Mr. Wesolowski:

Consider this verification of your reception of WFHR, Wisconsin Rapids, Wis. on the evening of September 29, 1974. It is sometimes interesting to receive reception reports, but sky wave propagation, the 11 year sun spot cycle, the Earth's magnetic flux density, effect of northern lights ect ect, have been pretty well explained back in the 1920s. However having been a DXer back in 1958, I understand your interest. Reception reports do not usually tell the broadcaster anything about their system or set of conditions that they don't already know. Watching the conditions makes an interesting hobby though.

Yours truly,

Rollyn Beusch
Chief Engineer
